Agenda

From Java/Android to Swift iOS

Swift is Safe Fast and Express

- ✓ Swift是现代化的开源通用编程语言
- ✓ Swift语法类似Scala , Javascript ES6 , Java , OC , C++ , Python , 上手容易
- ✓ Swift支持面向协议 , 面向对象和函数式编程
- ✓ 学习函数式编程的理想语言
- ✓ 支持macOS , iOS , Linux , Server Side, Android NDK
- ✓ IBM Swift Sandbox , Kitura Web Framework

- SE-0002: Removing currying `func` declaration syntax
- SE-0003: Removing `var` from Function Parameters
- SE-0004: Remove the `++` and `--` operators
- SE-0005: Better Translation of Objective-C APIs Into Swift
- SE-0006: Apply API Guidelines to the Standard Library
- SE-0007: Remove C-style for-loops with conditions and incrementers
- SE-0008: Add a Lazy flatMap for Sequences of Optionals

Swift 3.0 Roadmap

- Swift API Design Guidelines
- The Grand Renaming
- Mapping Objective-C APIs into Swift
- ~~ABI stability deferred~~

```
// Drawing with Core Graphics in Swift 3
```

```
// Get a transform that will rotate around a given offset
```

```
func rotationAround(offset: CGPoint, angle: CGFloat,  
    transform: CGAffineTransform = .identity) -> CGAffineTransform {  
    return transform.translateBy(x: offset.x, y: offset.y)  
        .rotate(angle)  
        .translateBy(x: -offset.x, y: -offset.y)  
}
```

```
// Trace a path in red
```

```
func trace(in context: CGContext, path: CGPath) {  
    let red = CGColor(red: 1, green: 0, blue: 0, alpha: 1)  
    context.saveGState()  
    context.addPath(path)  
    context.setStrokeColor(red)  
    context.strokePath()  
    context.restoreGState()  
}
```

- struct和class
- Enum枚举
- Interface vs. Protocol
- MultiThread

Java vs. Swift

Task	Java	Swift
Imports	<code>import package.ClassName</code>	<code>import framework</code>
Inheritance	<code>class Child extends Parent</code>	<code>class Child: Parent</code>
Interfaces	<code>interface A</code>	<code>protocol A</code>
Multiple inheritance	<code>class A extends P implements I</code>	<code>class A : P,I</code>
Variables	<code>int myVariable</code>	<code>var myVariable: Int</code>
Constructors	<code>A()</code>	<code>init()</code>
Creating Objects	<code>A obj = new A();</code>	<code>var obj : A=A()</code>
Method declaration	<code>Void doWork(String arg)</code>	<code>func doWork (arg: String)->Void</code>
Method invocation	<code>obj.doWork(arg)</code>	<code>obj.doWork(arg)</code>

Java

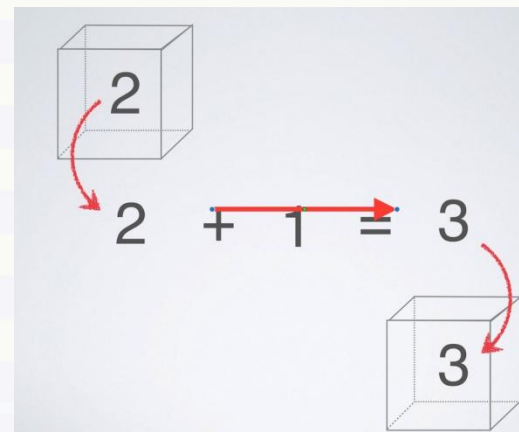

- static final 常量
- Java语言没有，Guava库提供
- Java支持自增++，自减--
- 逻辑控制和C基本一致
- Java有main方法
- Java需要;做行结束符

Swift

- var 变量，let常量
- 可选型Optional，通过if let解包
- Swift不建议使用，3.0版本将不支持自增
- 逻辑控制语句更现代
- Swift没有main方法
- Swift不需要行结束符

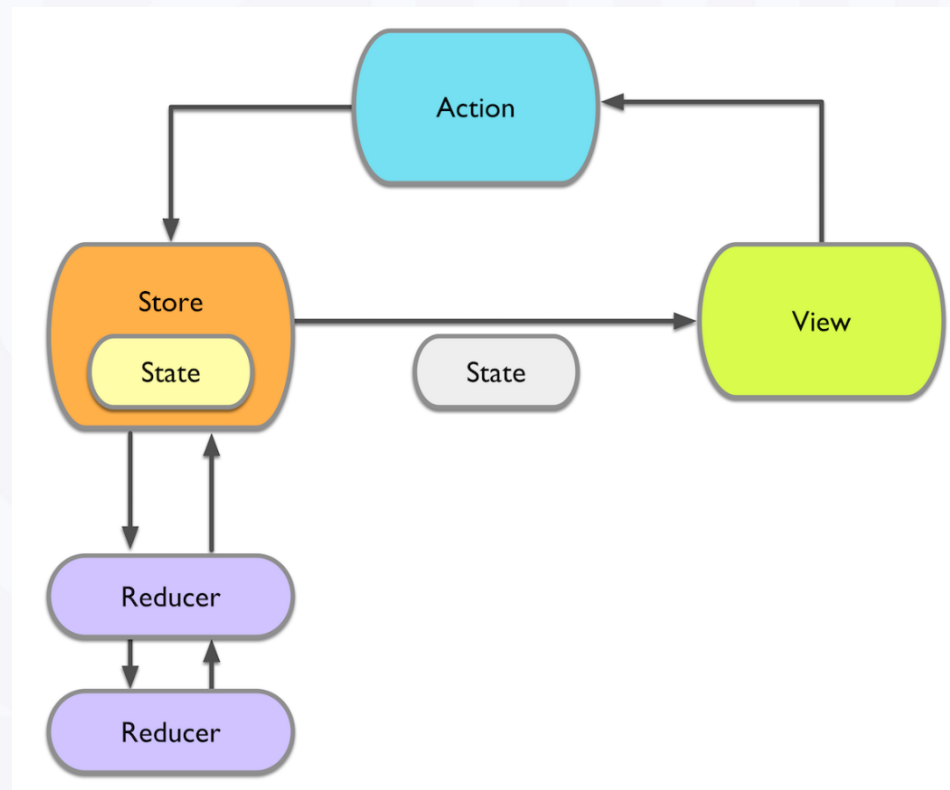

- 函数的定义和Java很不一样
- Swift中函数是一等公民，可以作为返回值和参数
- Swift函数可以通过元组支持多个返回值
- Swift函数可以嵌套，Java不支持
- Swift函数可以接收不定参数，跟Java基本类似
- Swift函数参数可以带默认值，和Python类似
- Swift支持闭包，Java8才支持lambda闭包
- Swift闭包的语法糖

- 高阶函数(higher order function)
- 柯里化(curry)
- Monad, Functor, Applicative ...
- map, reduce, flatMap, filter ...
- ReactiveX, Redux
- RxSwift, ReSwift

Redux -> ReSwift

Redux is a predictable state container for JavaScript apps.

- struct is value type
- 推荐使用struct 而不是class
- Swift语言实现包括几百个struct，只有几个class
- 构造方法是init()，析构方法是deinit()，类方法调用跟Java基本一样
- self相当于Java中的this，传入生命周期不一致的闭包需要声明为weak

- Android开发不建议使用Enum，影响性能
- Swift的Enum和Java类似，本质是一个类，里面可以包含函数。
- Swift Enum语法更简单
- Swift Enum支持扩展extension

Java Interface

- 可以继承
- Interface **不能** 带有具体实现的方法，Java8以后才可以
- implements

Swift Protocol

- 可以继承
- protocol 可以带有具体实现的方法
- extension 更强大
- 访问修饰符对 extension 的影响

Android

- Thread & Runnable
- Java Concurrency包
- Android多线程扩展
 - AsyncTask ,
HandleThread

Swift iOS

- NSThread
- GCD
- NSOperation
NSOperationQueue

```
let queue = DispatchQueue(label: "com.example.imagetransform")

queue.async {
    let smallImage = image.resize(to: rect)

    DispatchQueue.main.async {
        imageView.image = smallImage
    }
}
```

Android

- Xml layout布局
- 直接写xml代码，可视化辅助开发
- Android可以用Java添加和实现view
- Intent页面跳转
- 自定义view
- 碎片化严重，多分辨率适配困难

Swift iOS

- Xib & StoryBoard
- frame编程, Constrains约束和Masonry框架编程
- 推荐Auto Layout和Size Classes可视化开发
- Segue连线跳转
- iOS8 IBDesignable & IBInspectable
- 机型较少，适配相对简单

Label **Label** - A variably sized amount of static text.

Button **Button** - Intercepts touch events and sends an action message to a target object when it's tapped.

1 2 **Segmented Control** - Displays multiple segments, each of which functions as a discrete button.

View Controller - A controller that manages a view.

Storyboard Reference - Provides a placeholder for a view controller in an external storyboard.

Navigation Controller - A controller that manages navigation through a hierarchy of views.

Table View Controller - A controller that manages a table view.

Vary for Traits

- 难以维护？在文本模式下修改困难
- 多人协作？同时修改导致冲突
- Storyboard占用太多内存，导致Xcode卡顿和崩溃
- Xcode打开Storyboard文件即会产生修改
- 对于初学者，错误定位困难

- Storyboard的未来是光明的

- 按照业务模块分成多个Storyboard，每人负责的模块避免交叉
- 每个storyboard不要超过10个页面
- Refactor Storyboard重构
- Container，Xib，自定义View复用UI模块
- 复杂的输入表单，建议用SwiftyForm框架

- Swift开源框架已经很多了
- Swift也可以使用OC开源框架，但不推荐
- 网络请求框架
- JSON解析框架
- ReactiveX框架
- 图片缓存框架

Android

- Volley
- OkHTTP
- Retrofit

Swift iOS

- AFNetworking
- Alamofire
- Moya

图片缓存

- ImageLoader
- Glide
- Fresco

图片缓存

- SDWebImage
- HanekeSwift

Android

- Gson
- Jackson
- FastJson

- 系统自带org.json

Swift iOS

- ObjectMapper 
- Argo+Curry
- SwiftyJson

- NSJSONSerialization

Android

- RxJava
- RxAndroid
- OkHTTP + Retrofit + RxAndroid

Swift iOS

- ReactiveCocoa
- RxSwift
- Alamofire + Moya + RxSwift

- Android : Android Studio , Eclipse ADT
- iOS : Xcode , JetBrains Appcode

- Xcode上手较难 , 挑战开发习惯
- Xcode速度快 , 但不够稳定 , 经常Crash
- Android Emulator vs. iOS Simulator

Android

- Ant
- Maven
- Gradle

Swift iOS

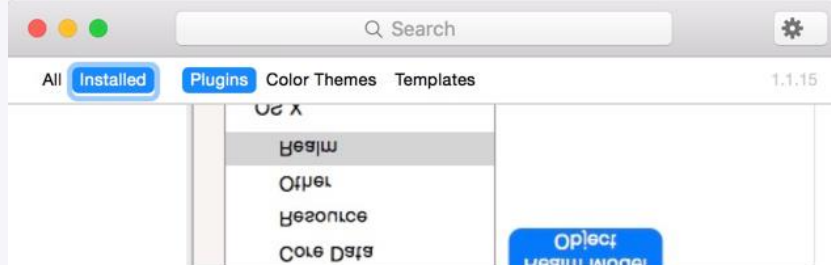

- CocoaPods
- Carthage
- Swift Package Manager
