

Swift在Airbnb的应用实践

陈坤 / Airbnb iOS高级工程师

Airbnb为什么使用Swift

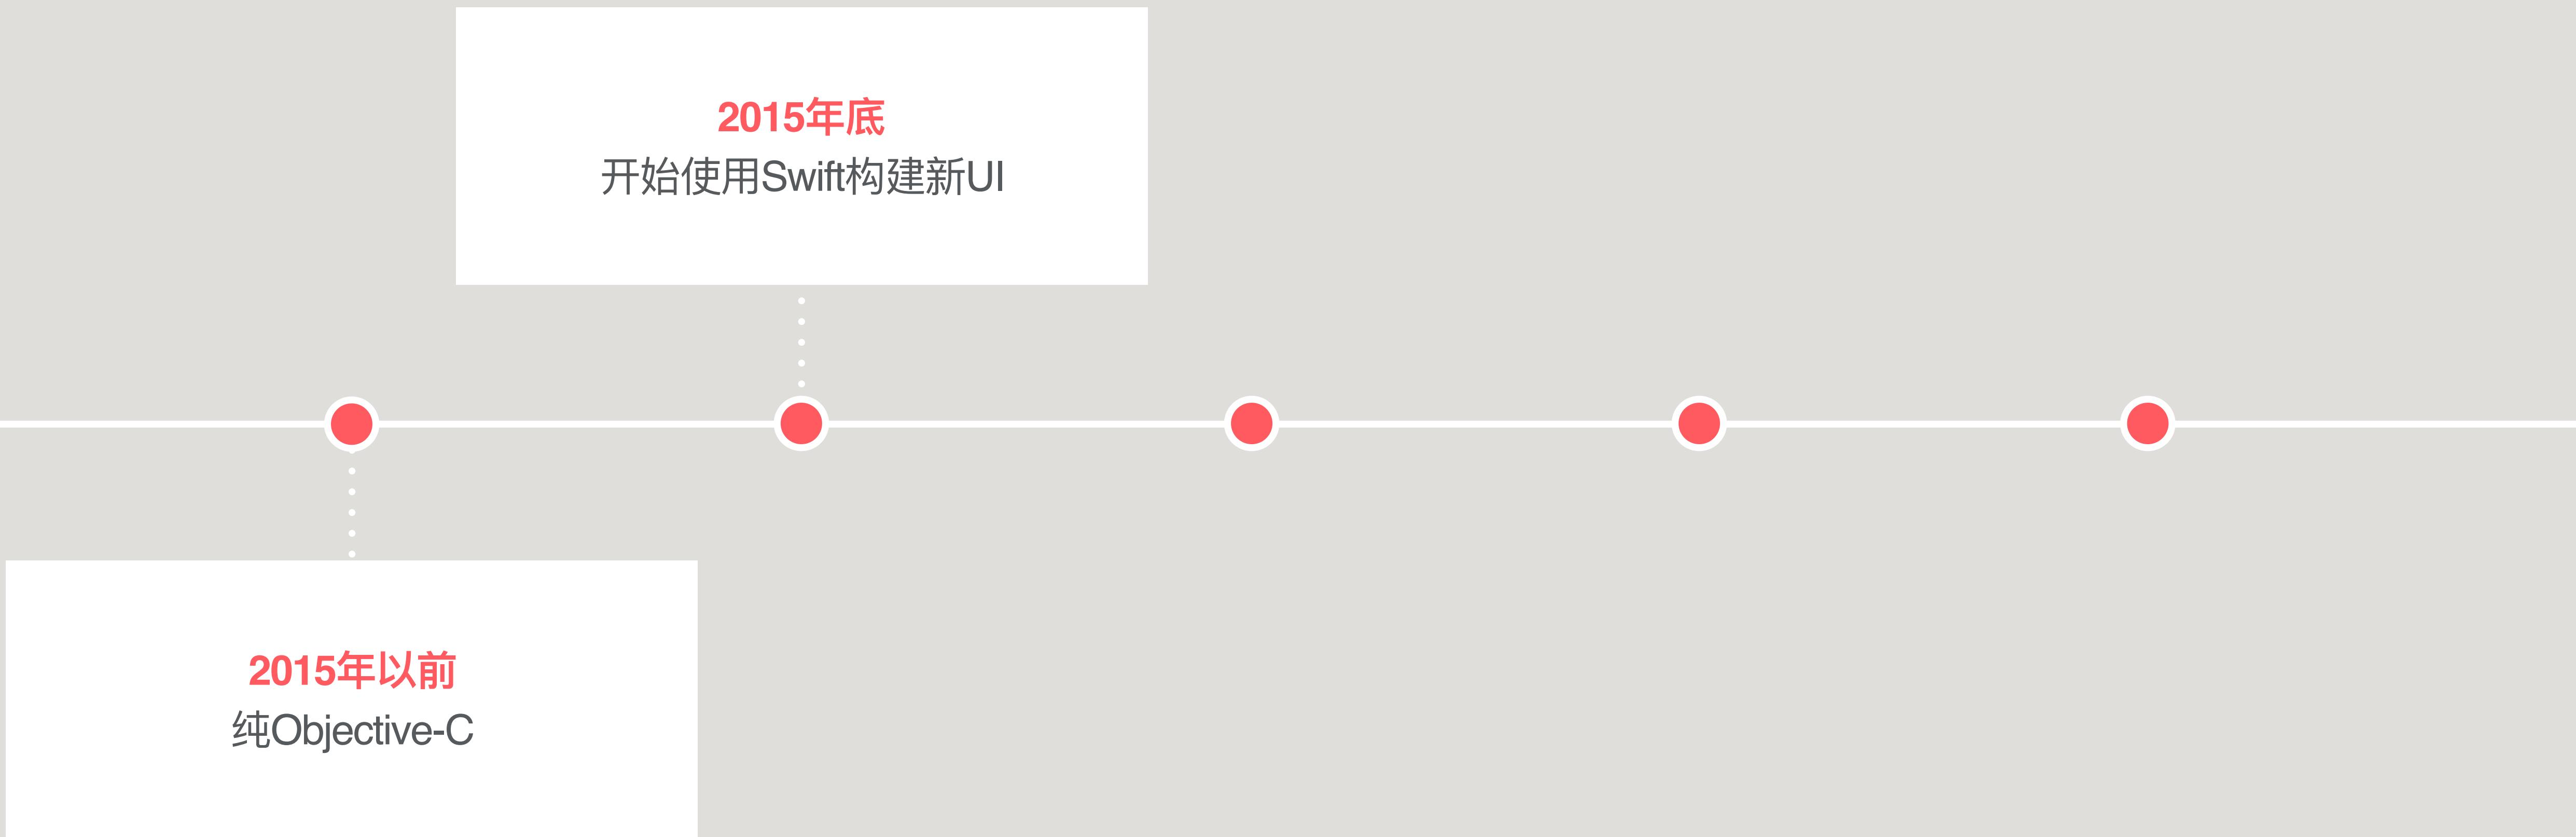

- 新语言(2014发布), 安全编程模型为出发点, 包含很多现代编程特性
- 苹果大力支持和推广
- 和苹果建立良好的关系
- 准备重写UI
- 可以直接调用Objective-C的代码

时间轴

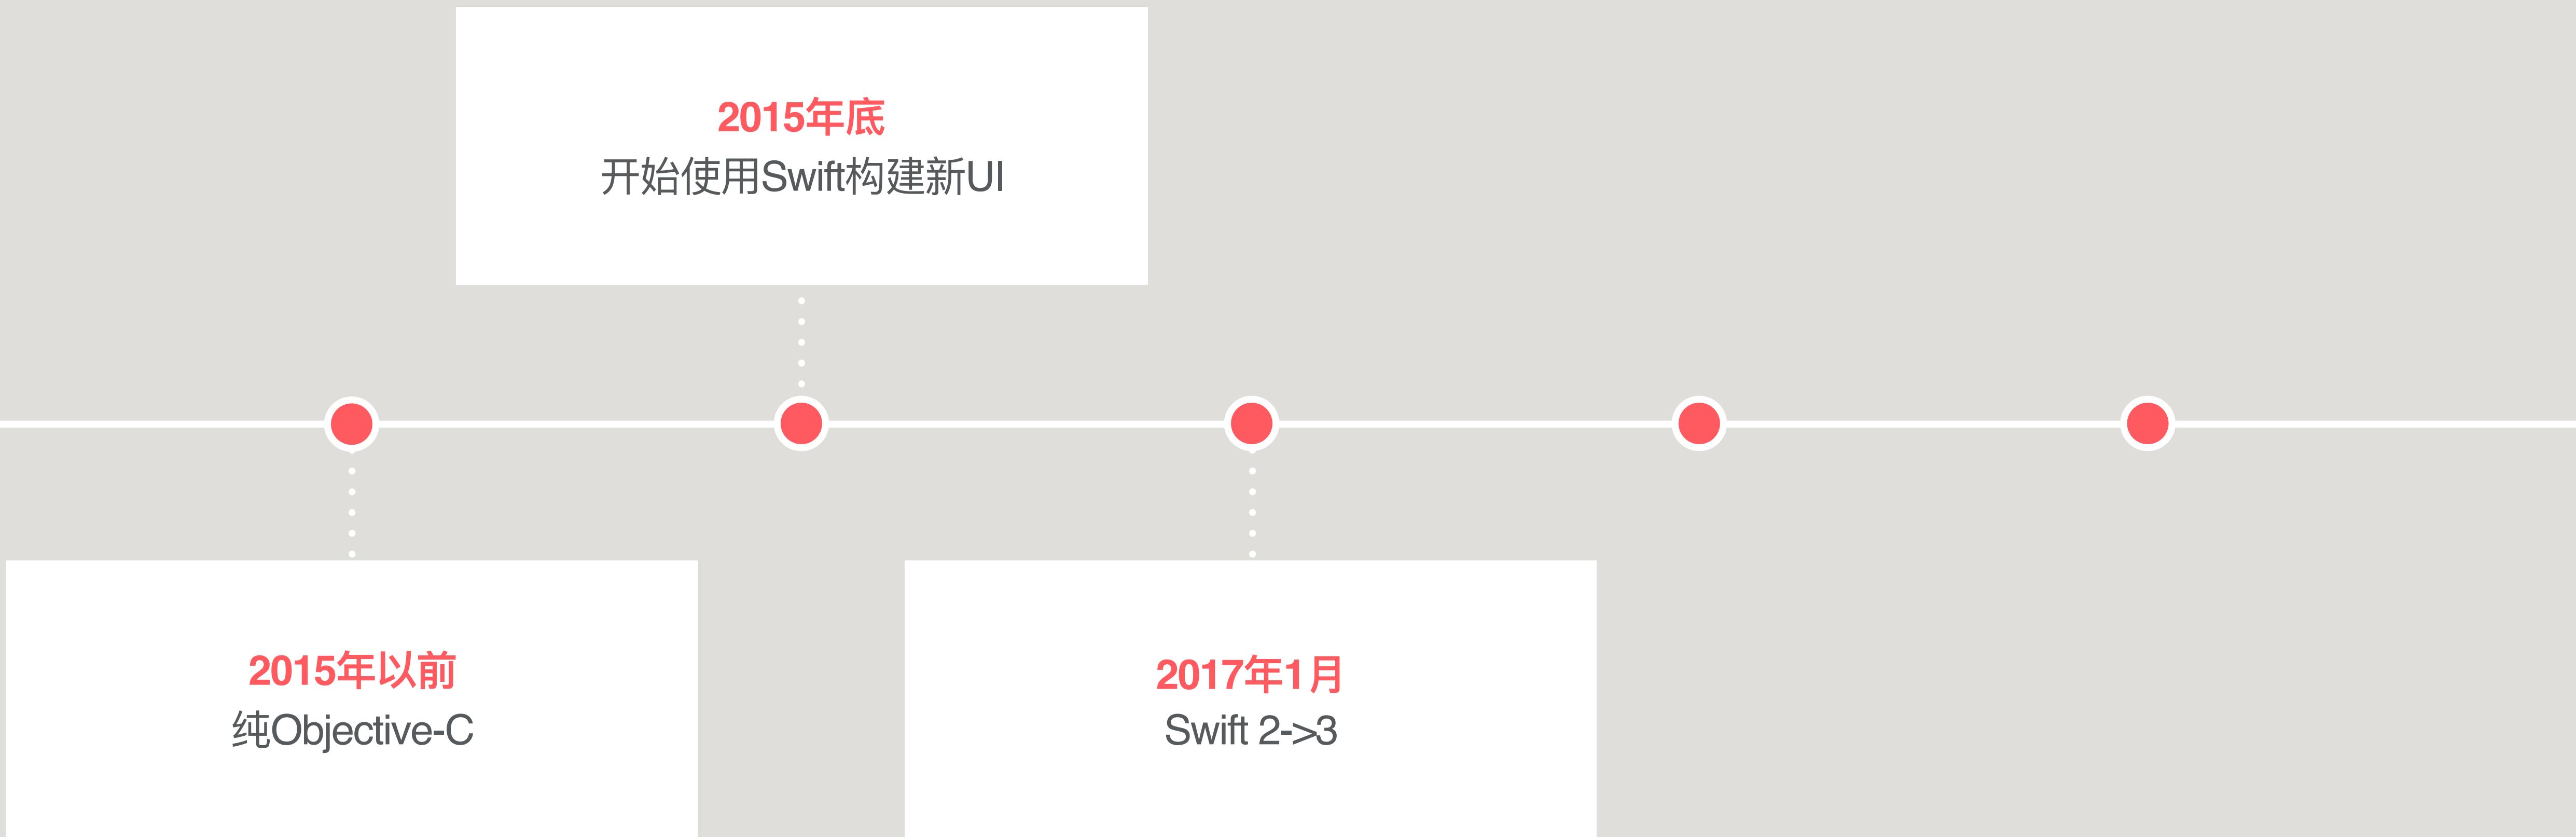

2015年以前
纯Objective-C

Vimeo

Swift的主要特性以及在Airbnb的应用

安全

Optional Variable

Objective-C

```
59 @interface AIRUser : AIRModel  
60  
61 @property (nonatomic, copy, readonly) NSString *userId;  
62 @property (nonatomic, copy, readonly) NSString *firstName;  
63 @property (nonatomic, copy, readonly) NSString *lastName;
```

Optional Variable

Swift

```
public final class AIRUser {  
    let userId: String  
    let firstName: String  
    let lastName: String?
```

T 和T?是完全不同的两个类型

```
guard let lastName = user.lastName else { return user.firstName }

// lastName's type is 'String' instead of 'String?' here
return "\(user.firstName) \(lastName)"
```

Wrap和Unwrap

```
if let lastName = user.lastName {
    // lastName's type is 'String' instead of 'String?' here
    return "\(user.firstName) \(lastName)"
} else {
    // Can't access lastName here
    return user.firstName
}
```

let VS var

Immutable is better than mutable

```
let color: UIColor  
if colorType == "red" {  
    color = .red  
}  
// Compile error
```

```
let color: UIColor  
if colorType == "red" {  
    color = .red  
} else {  
    color = .blue  
}
```

高级枚举类型

```
private enum DeepLinkState {  
    case notStarted  
    case started(instrumentId: String)  
    case queryingForCompletion(instrumentId: String, timer: Timer, startTime: Date)  
    case queryingFailed(instrumentId: String)  
}
```

Protocol Oriented Programming

Tool: BuildTimeAnalyzer-for-Xcode

调试编译时间

```
226 }
227
228 private lazy var slides: [TravelStoriesSlide.V1.TravelStoriesSlide] = {
229     return self.memory.slides?.enumerated().map { index, slide in
... }
```

Before

```
226 }
227
228 private lazy var slides: [TravelStoriesSlide.V1.TravelStoriesSlide] = {
229     () -> [TravelStoriesSlide.V1.TravelStoriesSlide] in
230         return self.memory.slides?.enumerated().map { index, slide in
... }
```

After

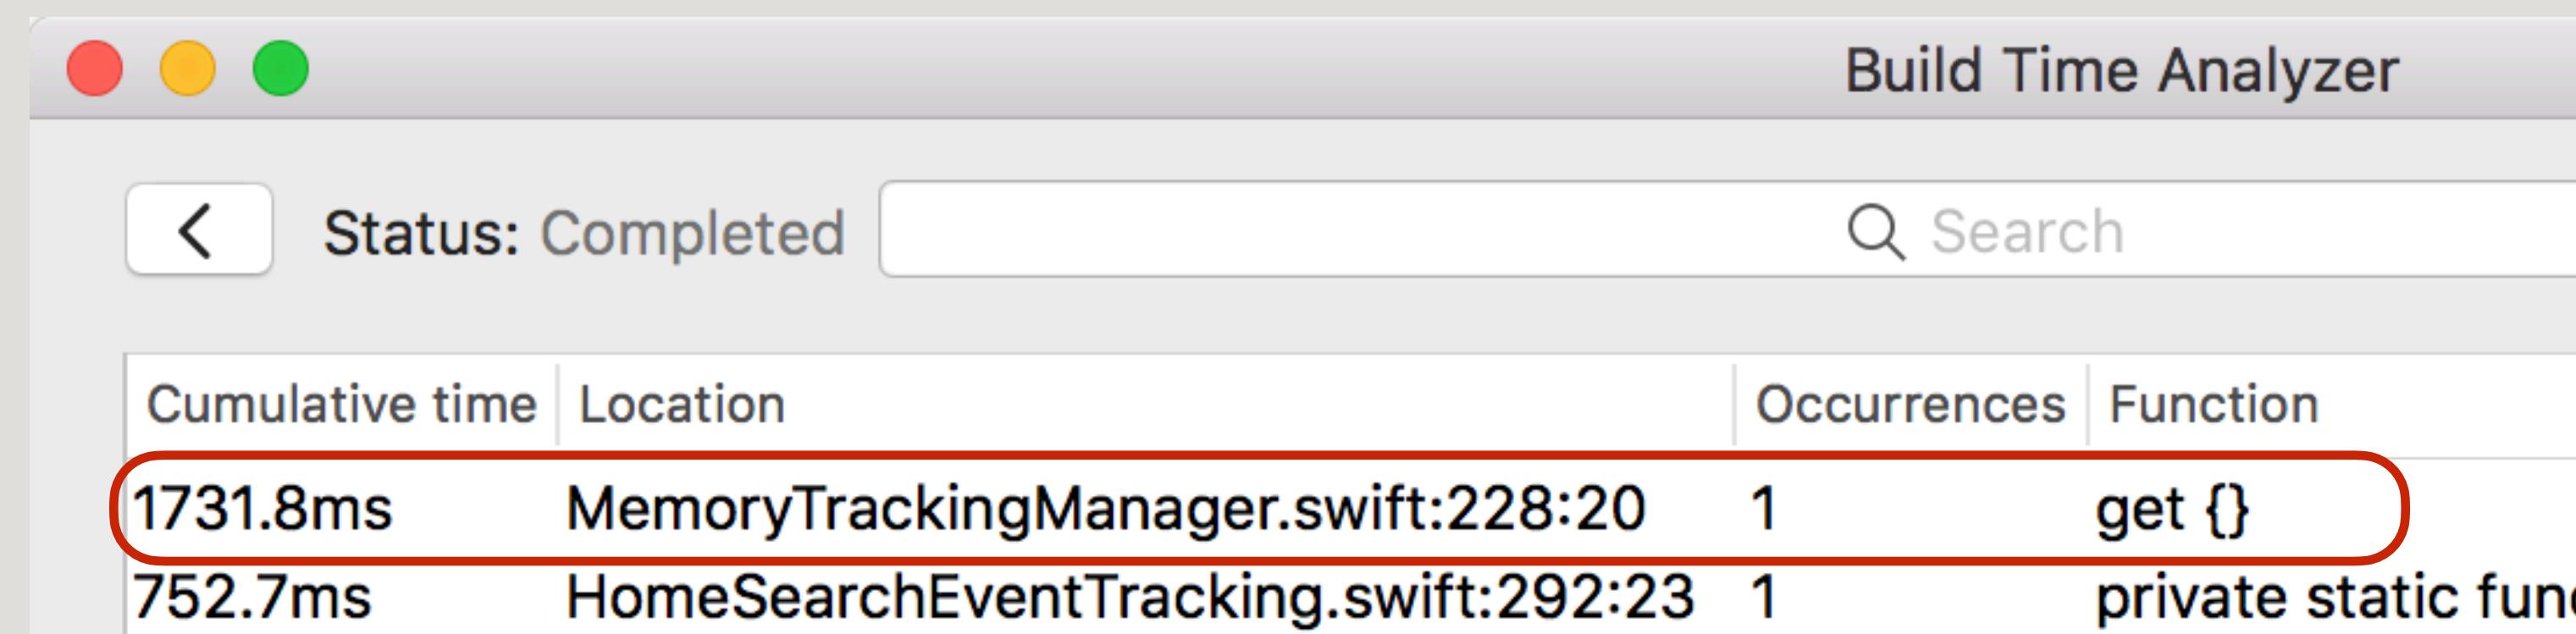

调试编译时间

```
226 }
227
228 private lazy var slides: [TravelStoriesSlide.V1.TravelStoriesSlide] = {
229     return self.memory.slides?.enumerated().map { index, slide in
... }
```

```
226 }
227
228 private lazy var slides: [TravelStoriesSlide.V1.TravelStoriesSlide] = {
229     () -> [TravelStoriesSlide.V1.TravelStoriesSlide] in
230         return self.memory.slides?.enumerated().map { index, slide in
... }
```

Before

After

其它例子

```
let myCompany = [
  "employees": [
    "employee 1": ["attribute": "value"],
    "employee 2": ["attribute": "value"],
    "employee 3": ["attribute": "value"],
    "employee 4": ["attribute": "value"],
    "employee 5": ["attribute": "value"],
    "employee 6": ["attribute": "value"],
    "employee 7": ["attribute": "value"],
    "employee 8": ["attribute": "value"],
    "employee 9": ["attribute": "value"],
    "employee 10": ["attribute": "value"],
    "employee 11": ["attribute": "value"],
    "employee 12": ["attribute": "value"],
    "employee 13": ["attribute": "value"],
    "employee 14": ["attribute": "value"],
    "employee 15": ["attribute": "value"],
    "employee 16": ["attribute": "value"],
    "employee 17": ["attribute": "value"],
    "employee 18": ["attribute": "value"],
    "employee 19": ["attribute": "value"],
    "employee 20": ["attribute": "value"],
  ]
]
```

12小时

```
let x = { String("\$(0)" + "") +
  String("\$(0)" + "") }(0)
```

15秒

解决方案

1. Use CI system to monitor the build time.
2. Educate engineers to provide type information as much as possible.
3. Use Lint to prevent engineers from common issues.
4. Offline type inference (Use SourceKit).

其它技巧

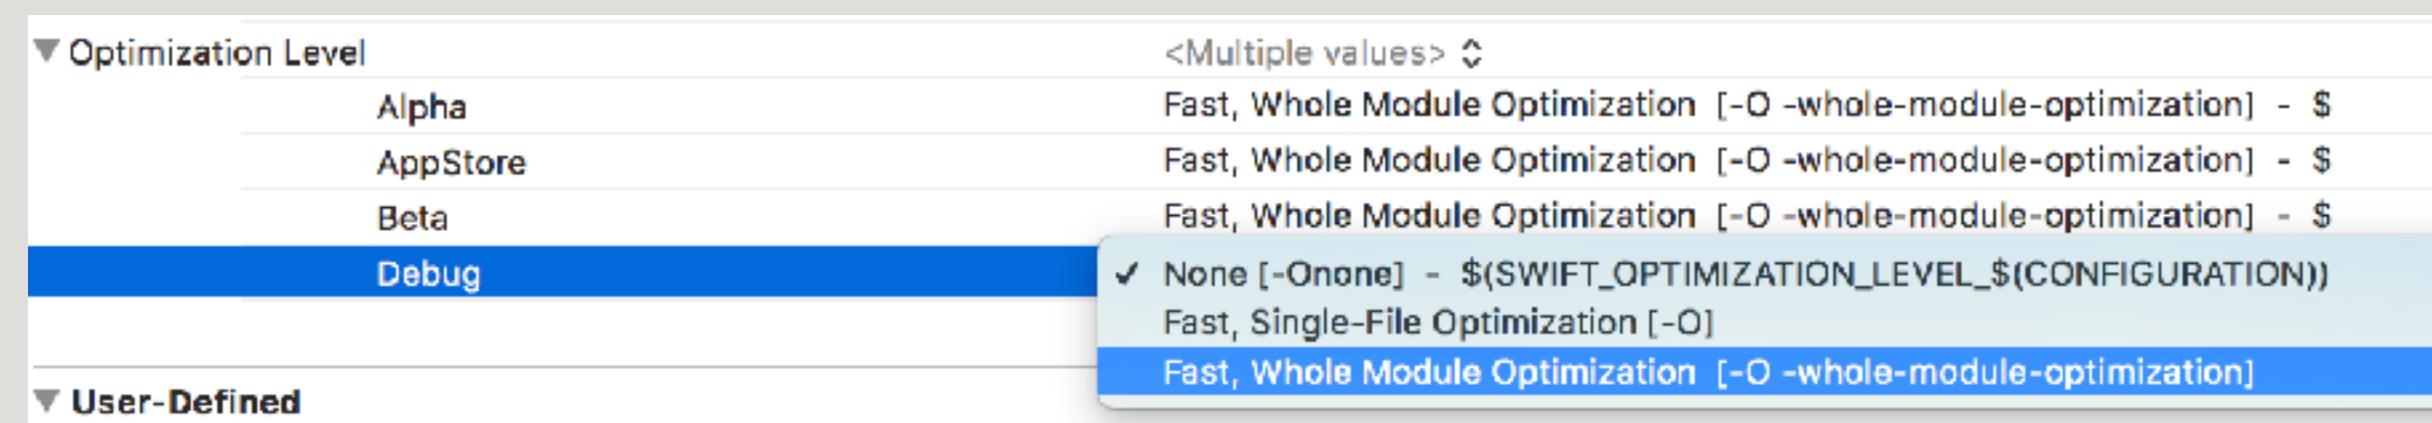

Split Libraries

Airbnb目前有70个左右的Libraries

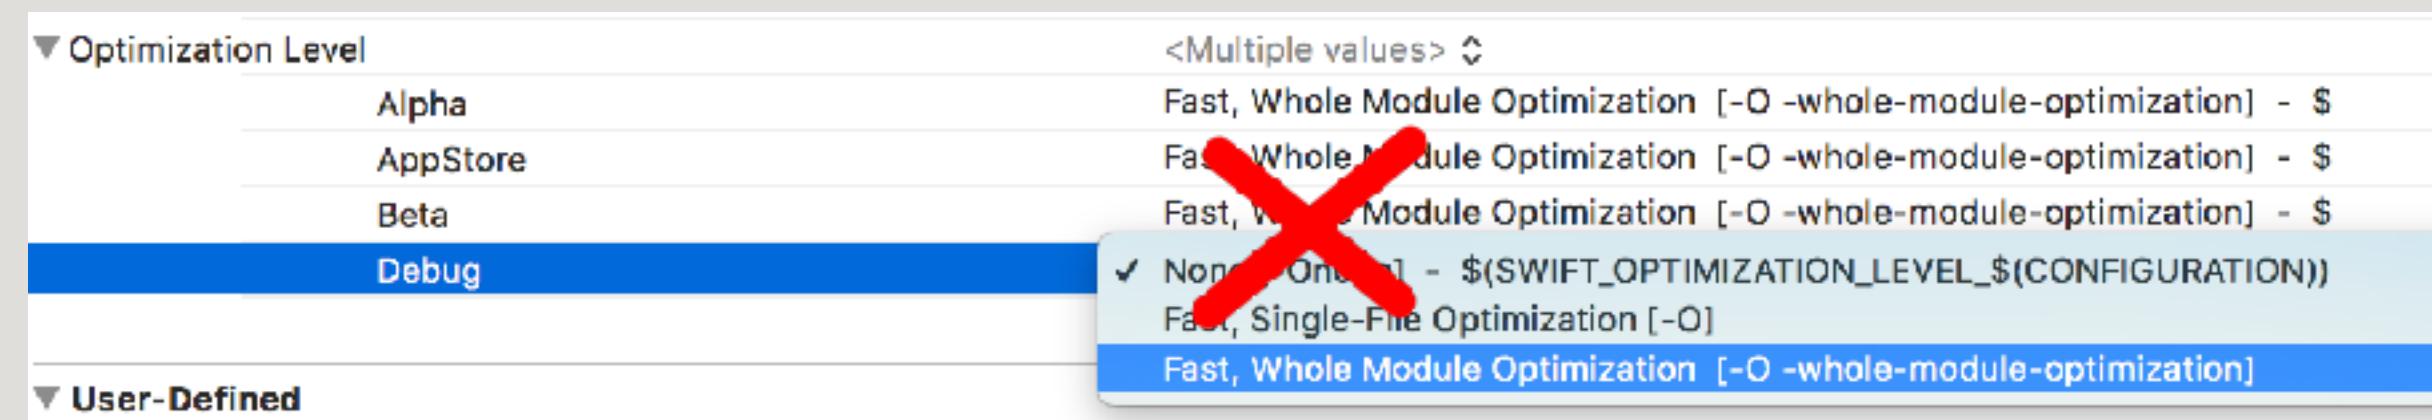

BUCK编译系统

大量缓存编译中间结果，CI编译时间大幅降低
不需要手动管理.xcodeproj文件
高级的依赖管理
开源
Uber和Airbnb都已使用

SWIFT_WHOLE_MODULE_OPTIMIZATION

SWIFT_WHOLE_MODULE_OPTIMIZATION

SWIFT_WHOLE_MODULE_OPTIMIZATION

The image shows two screenshots illustrating the configuration of the `SWIFT_WHOLE_MODULE_OPTIMIZATION` setting.

Xcode Build Settings (Left):

- Optimization Level:** Debug (selected)
- Fast, Whole Module Optimization [-O -whole-module-optimization] - \$SWIFT_WHOLE_MODULE_OPTIMIZATION** (highlighted with a red cross)
- Non-O [On] - \$(SWIFT_OPTIMIZATION_LEVEL_\${(CONFIGURATION)})**
- Fast, Single-File Optimization [-O]**
- Fast, Whole Module Optimization [-O -whole-module-optimization]** (highlighted with a blue selection bar)

Airbyte Configuration (Right):

- User-Defined** (highlighted with a red box)
- Setting** (highlighted with a red box)
- SWIFT_OPTIMIZATION_LEVEL_Alpha**: -Owholemodule
- SWIFT_OPTIMIZATION_LEVEL_AppStore**: -Owholemodule
- SWIFT_OPTIMIZATION_LEVEL_Beta**: -Owholemodule
- SWIFT_WHOLE_MODULE_OPTIMIZATION** (highlighted with a red box):
 - Alpha: YES
 - AppStore: YES
 - Beta: YES
 - Debug: YES

SWIFT_WHOLE_MODULE_OPTIMIZATION

Status: Completed

Cumulative time	Location	Occurrences

Before

4m24.634s

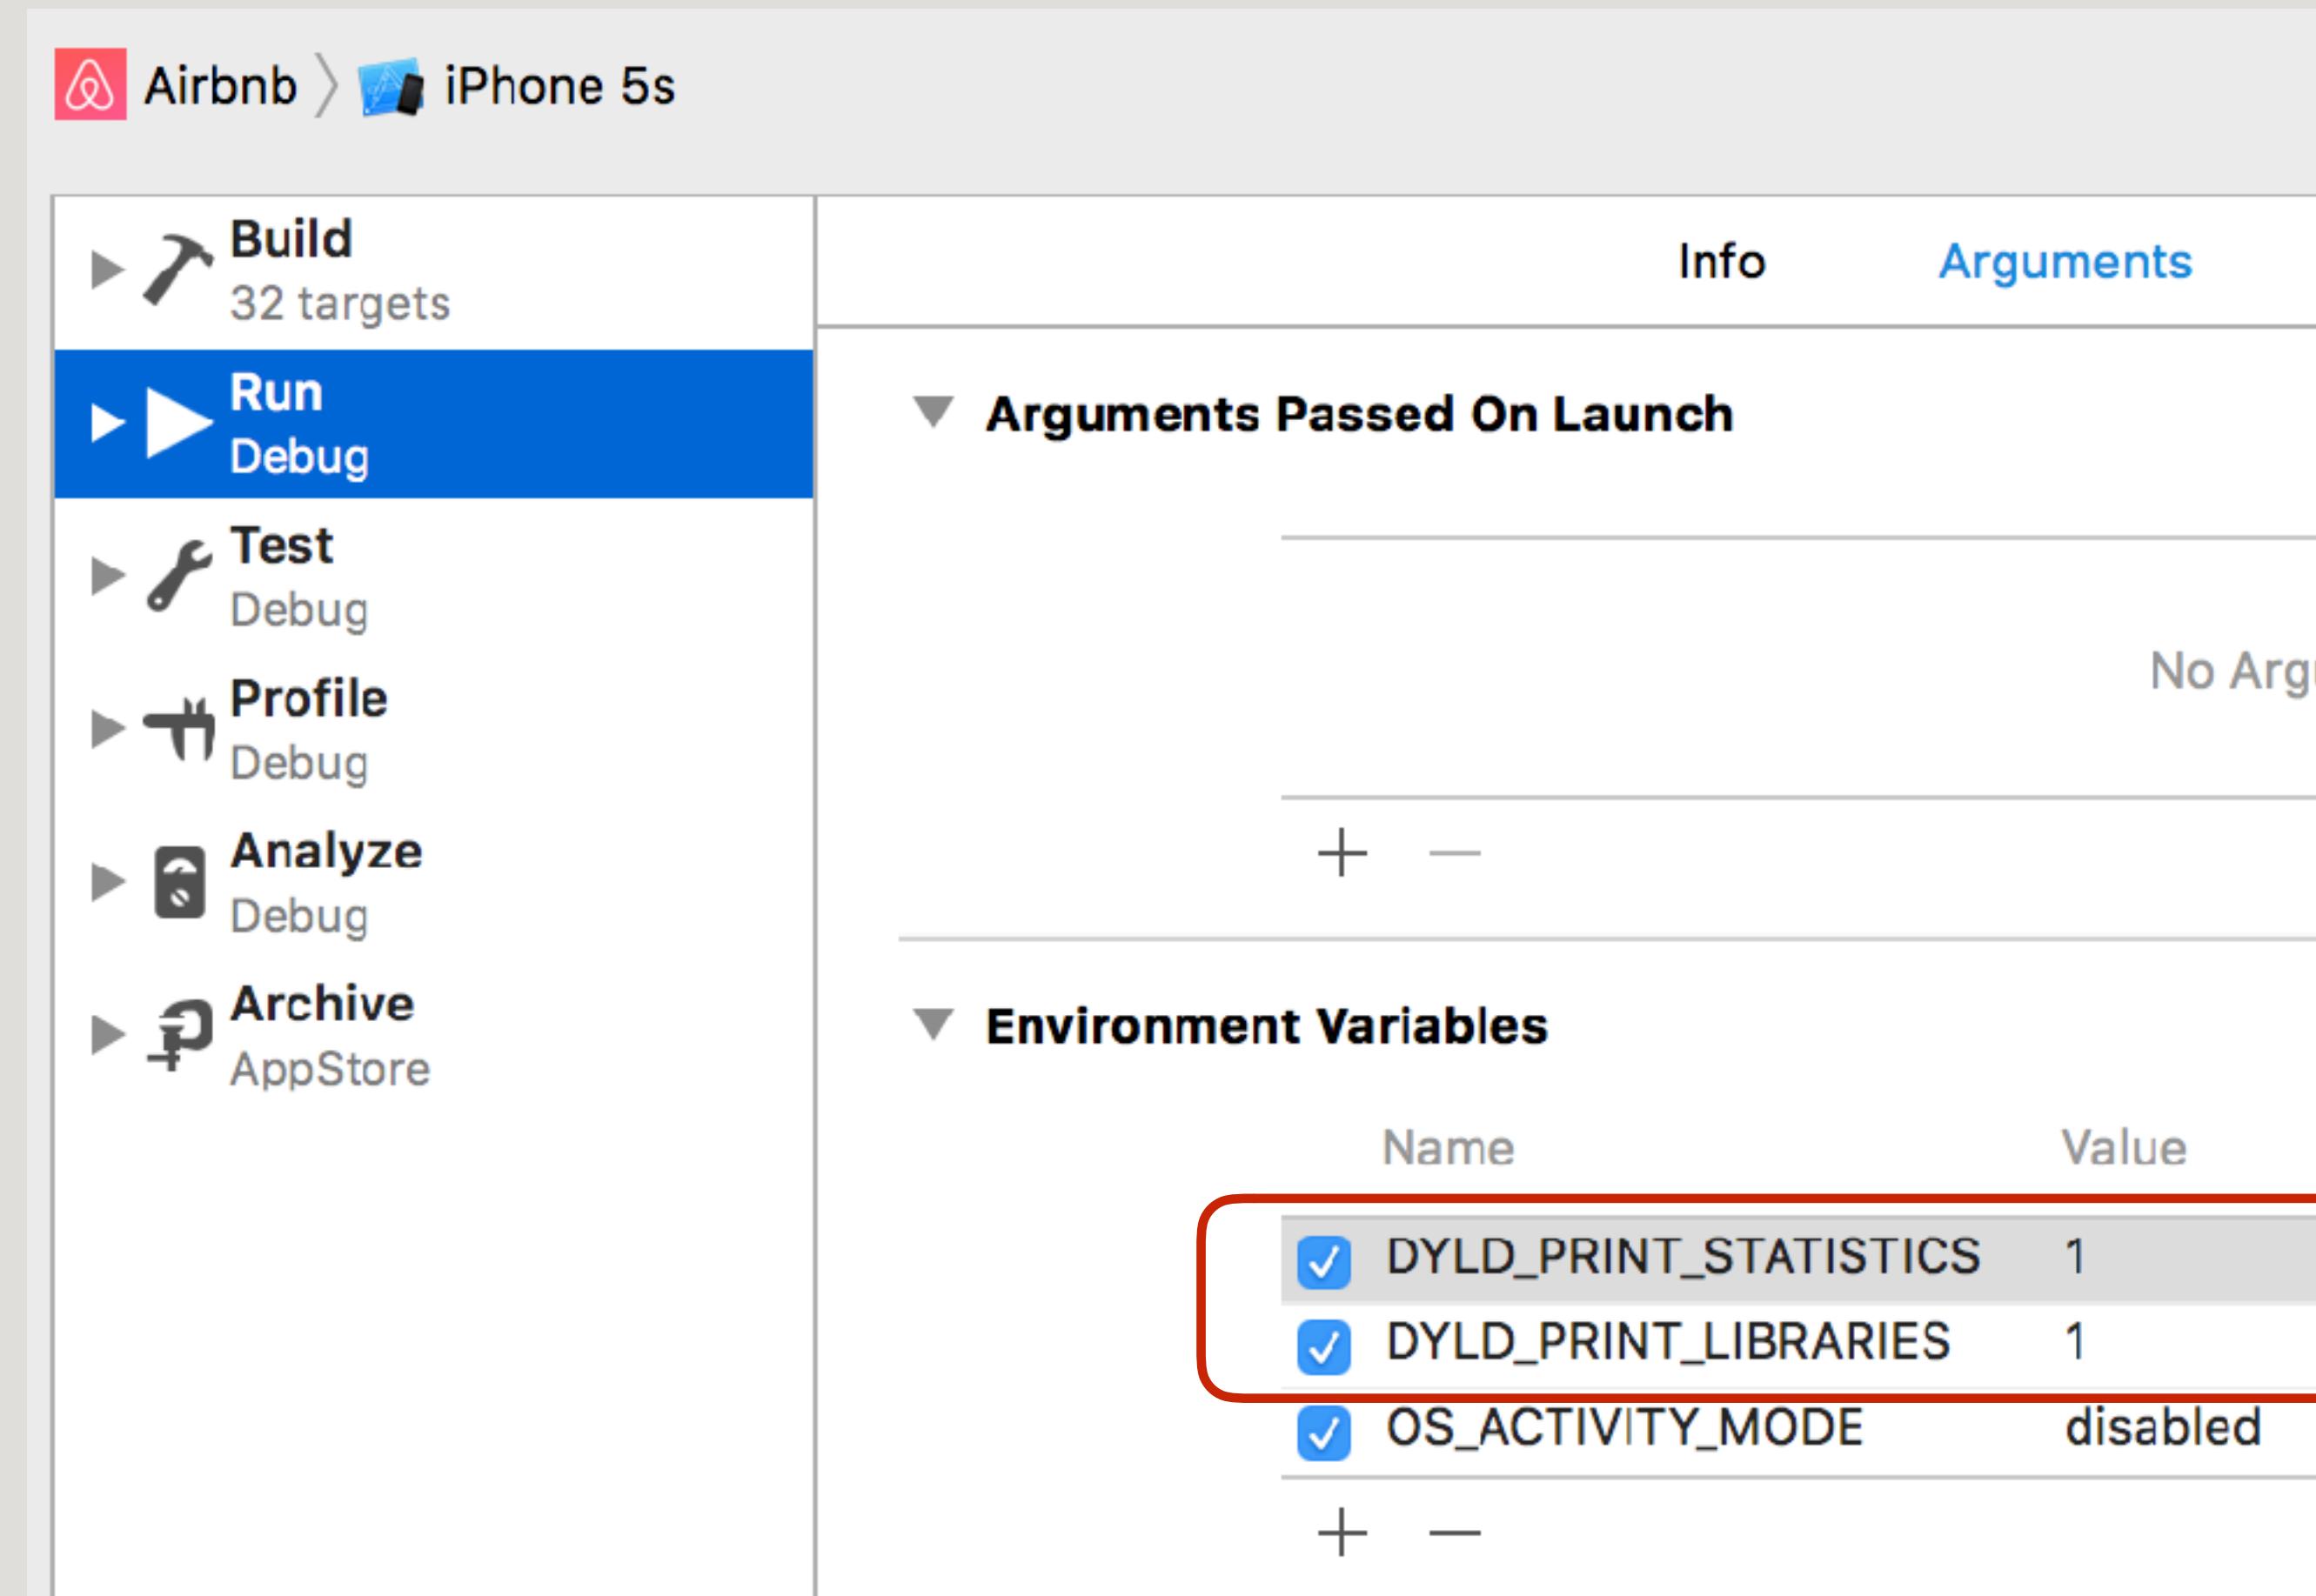

After

启动性能

测量pre-main时间

```
54 static NSInteger GetTimeSinceProcessStarted() {  
55     int mib[] = {CTL_KERN, KERN_PROC, KERN_PROC_PID , getpid()};  
56     struct kinfo_proc processInfo;  
57     size_t size = sizeof(processInfo);  
58     if (sysctl(mib, sizeof(mib) / sizeof(mib[0]), &processInfo, &size, NULL, 0) != -1) {  
59         struct timeval processStartTime = processInfo.kp_proc.p_un.__p_starttime;
```

调试dyld性能

动态库合并

Dynamic Library Merging

基本原理: Modify Main Target's linker flags

删除“-l” flags

增加“-filelist” flag

1. Consolidate Assets (Pre)

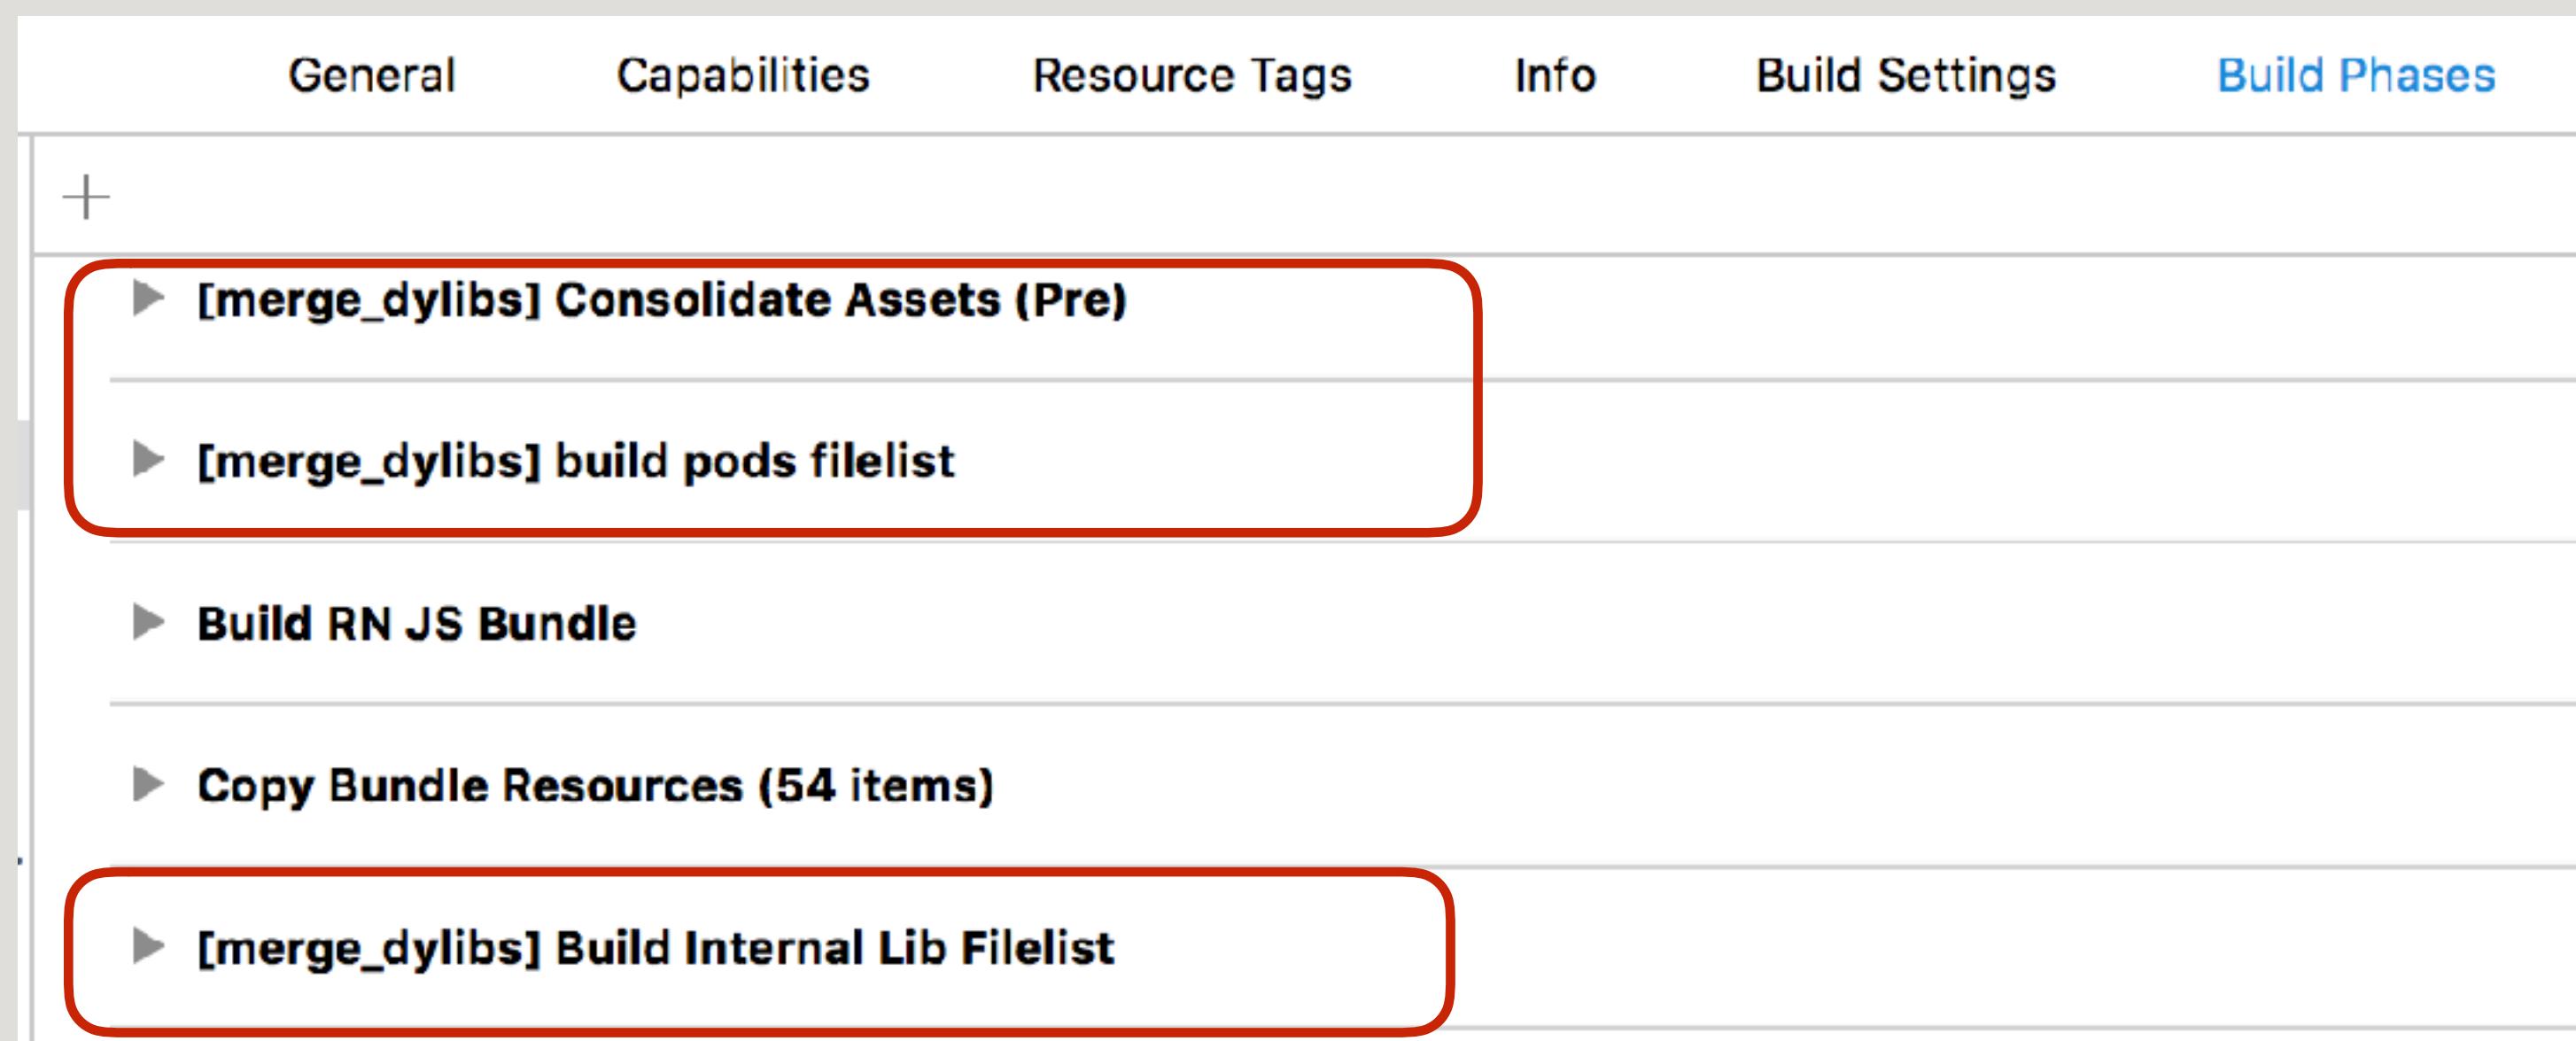

2. Build pods filelist

3. Build internal libraries filelist

4. Consolidate Assets (Post)

5. Remove unnecessary embedded libraries

Xcode Build Phases例子

性能改善

-50%

Pre-main Time

-12MB

Install Size

Swift和Objective-C混用

Swift和Objective-C混用

1. 一定要在objective-c代码里面正确的标注nullable!!!
2. 增量编译时间。

Thank you!

KUN.CHEN@AIRBNB.COM
